

PRECISION COATINGS

Case History:	The Walt Disney Company's Prospect Studios Los Angeles, California
Coatings:	RELÈS
Date:	2015
Area Coated:	Exterior Surfaces of Studio Buildings
Commercial Contractor:	Wilson & Hampton Painting Contractors

The Walt Disney Company's Prospect Studios required a coating with excellent dirt and oil release properties on its exterior structures to reduce maintenance and extend the life-cycle of the coated surface. Wilson & Hampton Painting Contractors recommended and applied Precision Coatings' RELÈS Clean Technology clear coating system to the exterior walls of the studios.

RELÈS was applied over the existing acrylic-emulsion painted surface to protect the existing color coat. RELÈS cures to a low sheen clear, highly cleanable surface providing resistance to staining, including oil and graffiti staining and providing abrasion resistance.

Due to RELÈS being low sheen and clear, the performance coating system does not impact the design integrity traditionally used on commercial architectural structures. RELÈS is a performance coating that protects color coats by creating a highly cleanable clear barrier coating.
